# COVID-19 Vaccines and Other Immunizations

You can get your COVID-19 vaccine at the same time as other vaccines.

Health experts agree that it is safe for people to get their COVID-19 vaccine and other vaccines at the same time.

COVID-19 vaccines were previously recommended to be given alone. This was done out of an abundance of caution, and not due to any safety concerns.

Vaccines protect you from getting and spreading diseases.

Vaccines work with your body's natural defenses to protect you from getting sick if you are exposed.

Getting vaccinated also helps protect those who are unable to receive certain vaccines or at higher risk for getting sick.

Stay up to date on all your vaccinations.

Getting vaccinated is part of routine doctor visits. Many people delayed getting their recommended shots because of the pandemic.

Talk to your healthcare provider about what vaccines you and your family should receive.

Visit the **CDC's Vaccine Webpage** to learn more about what vaccines are needed by age group
